Investment Objective

The fund aims to achieve moderate capital growth over the medium to long term and provide income. The fund invests in a range of asset classes including debt securities, equities, real estate, infrastructure, from anywhere in the world, including emerging markets. The fund invests at least 50% of its assets in securities of issuers with favourable environmental, social and governance (ESG) characteristics. The fund may invest in the following assets according to the percentages indicated:

- investment grade bonds: up to 100%
- below investment grade bonds: up to 60%
- emerging market bonds: up to 50%
- equities: up to 50%
- government bonds: up to 50%
- China A and B Shares and listed onshore bonds (directly and/or indirectly): less than 20% (in aggregate)
- eligible REITs and infrastructure securities: less than 30% (in each asset class)
- hybrids and contingent convertible (CoCo) bonds: less than 30%, with less than 20% in contingent convertible (CoCo) bonds
- money market instruments: up to 25%
- SPACs: less than 5%.

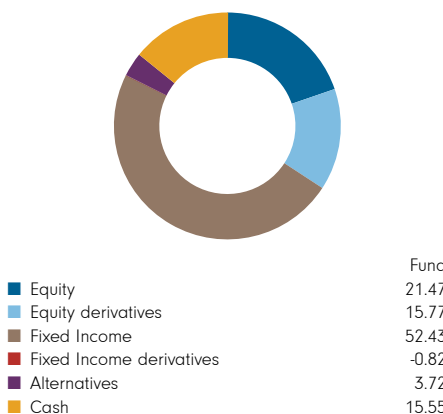

The fund may also invest in other subordinated financial debt and preference shares. The fund's exposure to distressed securities is limited to 10% of its assets. (For full details of the objective and other considerations please refer to the Prospectus)

Source: Fidelity, NAV-NAV basis, in the respective currencies with dividends re-invested. Returns are annualised for periods greater than 1 year. Please refer to "Share Class Details & Codes" for the launch dates of the respective share classes.

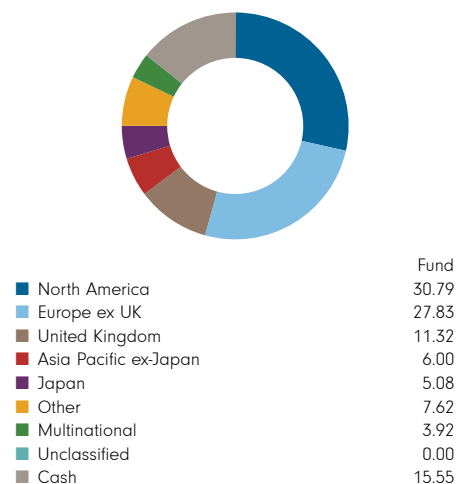

Asset Allocation^ (%)

Asset allocation: The asset class breakdown displays the totals for investments (including derivatives) in each category. Where derivatives are held, their contribution to the total is included on an exposure basis - i.e. an amount equivalent to the value that would have been invested in a fund to produce an equivalent holding. Where derivatives are used they may cause fund totals to exceed 100% (although very minor differences could be attributable to rounding).

^ Breakdowns based on the look through view, includes cash backing derivatives. The numbers will not add to 100% because of the use of derivatives in the portfolio. These numbers would differ from those at the top multi asset overlay level.

Geographic Exposure^ (%)

Definition of Terms

Annualised Volatility is a measure of how variable returns for a fund or comparative market index have been around their historical average. Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk.

Sharpe Ratio is a measure of a fund's risk adjusted performance taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate.

Yield to Maturity is the internal rate of return earned on a bond, assuming that the bond will be held until maturity and all coupon and principal payments will be made. It is an estimation of future return, as the rate at which coupon payments can be reinvested when received is unknown.

Duration is a measure of sensitivity of the fund value to changes in interest rates and includes all investments in the fund including derivatives. It takes into account that expected cash flows will fluctuate as interest rates change and affect a bond's price.

The Top 10 Positions table shows the largest individual investments. For equities, all investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage holding for each company. Where a company is listed in two separate countries, each listing may be classified as a separate issuing company. Fixed income investments are listed by individual issue (and not by issuer) to reflect the characteristics of the individual bonds. All derivatives are included on an exposure basis. Cash investments are not shown in the table.

*Gross estimated distribution yield

**For each bond in the fund, Fidelity looks at the rating given by three rating agencies (S&P, Moody's and Fitch) and applies the worst of the two best ratings (commonly known as the Basel method). If any derivatives are being used to adjust the credit quality of the fund, these are reflected in the Average Credit Rating".

FIL Investment Management (Singapore) Limited [FIMSL] (Co. Reg. No.: 199006300E) is a responsible entity for the fund in Singapore. Prospectus of the fund is available from FIMSL or its distributors upon request. Potential investors should read the prospectus before investing. All views expressed and references to specific securities are included for illustration only, and should not be construed as an offer or recommendation. This document is for information only and does not have regard to the specific investment objectives, financial situation and particular needs of the person who may receive it. Potential investor should seek advice from a financial adviser before investing. If that potential investor chooses not to seek advice from a financial adviser, he should consider whether the fund is suitable for him. Past performance of the fund is not indicative of the future performance. Prices can go up and down. The value of the shares of the fund and the income accruing to them may fall or rise. Investors investing in a fund denominated in a non-local currency should be aware of exchange rate risk. The fund is not available to US citizens, residents or greencard holders.
