Disclaimer

- Investment in Mutual Fund is not a form of saving and not protected by Deposit Protection Agency. Therefore, investment in Mutual Fund involves risk including possible loss of the principal amount invested.
- The fund is approved by The office of the SEC.
- The draft prospectus for KFENS50SSF does not indicate that The office of the SEC has certified the accuracy of the information contained in the prospectus nor guaranteed the price or return on investment for such fund. The Management Company has reviewed the information in this summary prospectus as at 29 October, 2021 with professional care as the party responsible for the management of the fund and certifies that the above information is correct, true and not misleading.
- Investors can purchase unit linked insurance from this fund through the specified insurer. Purchase of unit-linked fund may be subject to certain restrictions and practice. Investors should study the policy details of the unit linked fund prior to making an investment decision. Investor shall receive the proceeds from the insurance company within 5 business days after the valued date of NAV and the payment shall be subject to practice of Unit Linked Insurance.
- Units in the Fund are divided into two classes – accumulation class and super savings fund class. Unitholders may switch the type of units in the Fund under the terms and conditions specified by the Management Company. The Management Company will make a separate calculation of asset value of each class of units. Different classes of units may have the same or different net asset value per unit.
- Classification of units shall not affect the responsibility of the Fund to a third party since responsibility of the Fund for each type of units is separated. All assets of the Fund remain under equal responsibility to a third party.

3. Peer group comparison can be obtained at point of sale. It is used to measure the performance of mutual funds under the same category by percentiles which divide the set of data into 100 equal parts and rank from lowest to highest.
 - 5th Percentile (Top 5% performance)
 - 25th Percentile (Top 25% performance)
 - 50th Percentile (Median performance)
 - 75th Percentile (Bottom 25% performance)
 - 95th Percentile (Bottom 5% performance)

Detailed Explanation of Disclosures in the Prospectus

The information disclosed below is a summary of risk dimensions.

Topic	Disclosure																																																
1	<p>Market Risk</p> <p>Market risk is the risk relating to fluctuation in value of securities, the loss of which is due to the factors that affect an entire market or asset class. Market risk has different effect on different type of funds as follows:</p> <table border="1" data-bbox="416 371 1533 510"> <tr> <td colspan="8">Equity Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.</td> </tr> <tr> <td></td> <td colspan="6">Low</td> <td>High</td> </tr> <tr> <td>SD</td> <td>< 5%</td> <td>5-10%</td> <td>10-15%</td> <td>15-25%</td> <td>> 25%</td> <td></td> <td></td> </tr> </table> <p>Equity Fund is generally exposed to the market risk when the value of the securities in which the fund deviates (increase or decrease) as a result of external factors such as economic conditions, investment climate, political factors in the issuer’s country or other country. The market risk in equity fund is expressed in terms of standard deviation (SD) – the higher the SD, the higher the market risk (due to changes in securities prices).</p> <p>The market risk of domestic equities can be determined from the type of stocks in which the fund invests.</p> <table border="1" data-bbox="416 808 1533 1014"> <tr> <td colspan="8">Domestic equities – The market risk can be determined from the type of stocks in which the fund invests (approximately 80% of NAV).</td> </tr> <tr> <td></td> <td colspan="6">Low</td> <td>High</td> </tr> <tr> <td>Type of stocks</td> <td></td> <td>General</td> <td>Large Cap</td> <td>Mid/small</td> <td>Sector</td> <td></td> <td></td> </tr> </table>	Equity Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.									Low						High	SD	< 5%	5-10%	10-15%	15-25%	> 25%			Domestic equities – The market risk can be determined from the type of stocks in which the fund invests (approximately 80% of NAV).									Low						High	Type of stocks		General	Large Cap	Mid/small	Sector

Country concentration risk	≤ 20%	20-50%	50-80%	> 80%																																													

	Topic	Disclosure
3	Maximum Drawdown	<p>Maximum drawdown means an accumulated loss as a result of the investment in the past five years from the reporting date (or since inception if the fund has been established for less than five years). It is calculated as follows:</p> $\text{Drawdown}_{(t)} = \frac{\text{Unit value}_{(t)} - \text{Highest unit value}^*}{\text{Highest unit value}^*}$ $\text{Maximum Drawdown} = \min (\text{Drawdown}(t))$ <p>Remark: * Highest unit value means the highest value of unit in the preceding period up to the calculation date (t).</p>
4	Standard Deviation	<p>Standard Deviation (SD) of Fund measures the volatility the fund's returns, using the calculation as prescribed by Association of Investment Management Companies re: Standard for Measurement and Presentation of Performance of the Mutual Funds. SD expresses the historical performance in annual percentage for the five years preceding the reporting date.</p>
5	Tracking Error	<p>Tracking Error (TE) is the difference between a mutual fund portfolio's returns and the benchmark index it was designed to copy. This indicates how well the mutual fund is performing against the benchmark index and shows how much the mutual fund deviates from the benchmark index. For example, if the mutual has a low TE, this means the fund has slightly deviated from the benchmark index and therefore the fund is efficient in copying the benchmark index. On the other hand, if the mutual has a high TE, this means the fund has substantially deviated from the benchmark index and therefore it is unlikely that the fund will achieve return at similar rate to the benchmark index.</p> <p>TE is used for tracking error of passive funds/ index tracking such as index fund or ETF.</p>
6	Portfolio Turnover Ratio	<p>Portfolio Turnover Ratio (PTR) is the percentage of a mutual fund or other investment's holdings that have been replaced in a given year which can better reflect the investment strategies employed by the fund manager. It is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over the past 12-month period, divided by the total net asset value (NAV) of the fund of the same period.</p> $\text{PTR} = \frac{\text{Min (Subscription, Redemption)}}{\text{Average NAV}}$
