Fund information

Investment in mutual funds **is not** a money deposit.

What are you investing in?

• Investment Policy

- Minimum 80% of NAV in average of fund accounting year are invested in the master fund named, Allianz Europe Equity Growth Fund (master fund) (ISIN Code:LU0256839274).
- The master fund invests primarily in equities of listed companies in European Union countries, Norway or Iceland including England, France, Germany, Sweden, Denmark, Switzerland, Spain, Netherland, Ireland and Belgium.

Further information of the master fund, you may visit www.allianzgi.sg

- The Management Company reserves the right to change the type and feature of the Fund to a “fund of funds” or making direct investments in foreign instruments and/or securities or to revert to “feeder fund” in the future without increasing the risk spectrum of the Fund. In this respect, the change shall be made at the Fund Manager’s discretion according to market situation by taking into consideration the utmost benefits of the unitholders.

• Management Style

- The fund aims to track investment return of the master fund (passive management).
- The master fund aims to generate higher return than the benchmark (active management).

Who is the fund suitable for?

- Investors who can accept fluctuation of prices of stocks in which the fund invests, which may increase or decrease to the level below the initial investment, resulting in a loss.
- Investors who prefer medium to long term investment in anticipation of better return in long term than investment in fixed-income instruments.

This fund **is not suitable for:**

Investors who prefer fixed rate of return or preserve full amount of principal.

For further clarification on this investment policy and potential risks, what should you do?

- **Read** the full prospectus or **seek** advice from the management company or its appointed selling agents.

Unless you have full grasp in the nature of risks, it is advisable you should refrain from investment in this fund.

What are the key risks of the Fund?

• Important Risk Warnings

- This fund invests in offshore equities instruments that contain the market risks in association with economy, politics or society. Such market risks can affect business to the extent that change the market condition and consequently affect stock prices.
- The fund may invest in forward contract to enhance portfolio efficiency and may invest in structured note. This may contain higher risks than investing directly in underlying securities.
- This mutual fund's investment has no concentration investment in any countries more than 20% in their portfolio.
- Investors should study information on investment in RMF and find more information at full prospectus or tax guideline.
- Investors may not pledge, sell, dispose of or use the units as collateral.

Risk Spectrum of the Fund

Key Risks

1. Market risk

	Low Risk	5-10%	10 - 15%	15 - 25%	High Risk
Standard Deviation (SD)	< 5%	5-10%	10 - 15%	15 - 25%	> 25%

*Standard Deviation (SD) is calculated from the last 5 years (or since launch for the fund launched within that period)

2. Exchange rate risk

	Low Risk	High Risk
FX Hedging	Fully/Almost fully hedge	At discretion

Remark: The fund enters into a forward contract to hedge against the exchange rate risk at 50% of the foreign investment value.

3.High concentration risk

Remark: This fund has concentration investment in Industrials and Information Technology

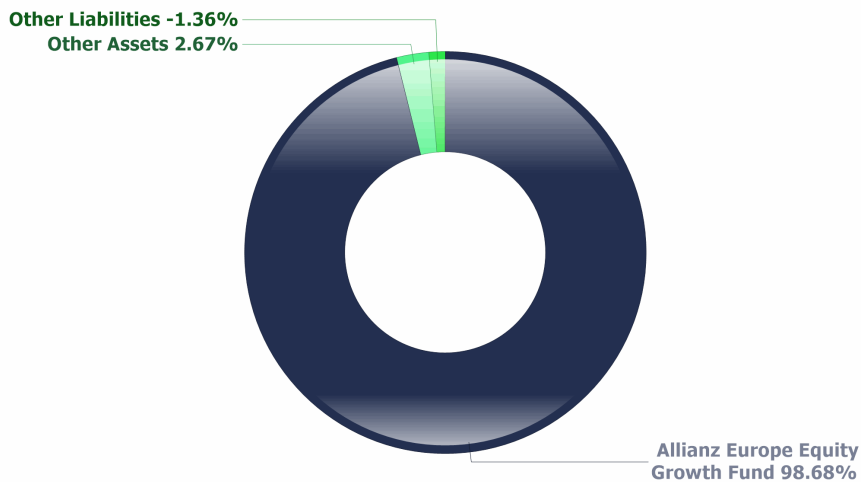

Remark: This fund has no concentration investment in any countries more than 20% in their portfolio.

Asset allocation

 - 50th Percentile (Median performance)
 - 75th Percentile (Bottom 25% performance)
 - 95th Percentile (Bottom 5% performance)
4. Fund returns are annualized for periods longer than one year.

Detailed Explanation of Disclosures in the Prospectus

The information disclosed below is a summary of risk dimensions.

Topic	Disclosure																								
1	<p>Market Risk</p> <p>Market risk is the risk relating to fluctuation in value of securities, the loss of which is due to the factors that affect an entire market or asset class. Market risk has different effect on different type of funds as follows:</p> <table border="1" data-bbox="416 405 1533 544"> <tr> <td colspan="8">Mutual Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.</td> </tr> <tr> <td></td> <td>Low</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td>High</td> </tr> <tr> <td>SD</td> <td></td> <td>< 5%</td> <td>5-10%</td> <td>10-15%</td> <td>15-25%</td> <td>> 25%</td> <td></td> </tr> </table> <p>Mutual Fund is generally exposed to the market risk when the value of the securities in which the fund deviates (increase or decrease) as a result of external factors such as economic conditions, investment climate, political factors in the issuer’s country or other country. The market risk is expressed in terms of standard deviation (SD) – the higher the SD, the higher the market risk (due to changes in securities prices).</p>	Mutual Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.									Low						High	SD		< 5%	5-10%	10-15%	15-25%	> 25%	
Mutual Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.																									
	Low						High																		
SD		< 5%	5-10%	10-15%	15-25%	> 25%																			
2	<p>Currency Risk</p> <p>Currency Risk is the possibility that changes in exchange rate will affect the value of investment units. For example, if a mutual fund invests in securities denominated in US Dollar during Thai Baht depreciation and the units are subsequently sold when Thai Baht appreciates, the mutual fund will receive lower return in Thai Baht. On the other hand, if the same fund invests in securities denominated in US Dollar during Thai Baht appreciation and the units are subsequently sold when Thai Baht depreciates, the mutual fund will receive higher return in Thai Baht. Therefore, currency hedging techniques as follows are key tools to manage such risk.</p> <table border="1" data-bbox="416 1048 1533 1283"> <tr> <td colspan="7">Currency risk is assessed based on the exchange rate hedging policy of the fund.</td> </tr> <tr> <td></td> <td>Low</td> <td></td> <td></td> <td></td> <td></td> <td>High</td> </tr> <tr> <td>FX hedging</td> <td></td> <td>Fully / Almost fully hedged</td> <td>Partially</td> <td>At discretion</td> <td>No hedging</td> <td></td> </tr> </table> <ul style="list-style-type: none"> • Fully / Almost fully hedged: Investors have no exposure to currency risk. • Partially-hedged with fixed ratio: Investors may be exposed to certain level of currency risk. • Hedging at discretion of the fund manager: Investors may be exposed to currency risk because it is the discretion of the fund manager whether to use a currency hedging technique. • No hedging: Investors are exposed to currency risk. 	Currency risk is assessed based on the exchange rate hedging policy of the fund.								Low					High	FX hedging		Fully / Almost fully hedged	Partially	At discretion	No hedging				
Currency risk is assessed based on the exchange rate hedging policy of the fund.																									
	Low					High																			
FX hedging		Fully / Almost fully hedged	Partially	At discretion	No hedging																				
3	<p>High Concentration Risk</p> <table border="1" data-bbox="707 1682 1489 1765"> <tr> <td style="text-align: center;">Low Risk</td> <td style="text-align: center;">High Risk</td> </tr> <tr> <td style="text-align: center;"> <table border="1"> <tr> <td>≤ 10%</td> <td>10-20%</td> <td>20-50%</td> <td>50-80%</td> <td>> 80%</td> </tr> </table> </td> <td></td> </tr> </table> <p>Issuer concentration risk</p> <p>This risk comes from investing more than 10% of the fund’s NAV in one issuer, party, or other person who has obligations under the instruments or the contracts.</p> <p>Concentration risk does not include investment in the following assets:</p> <p>Thai government bonds;</p> <p>Investment-grade foreign government bonds; and</p> <p>Investment-grade deposits or cash-equivalent instruments of a depository or an issuer.</p> <p>- High Issuer Concentration Risk</p>	Low Risk	High Risk	<table border="1"> <tr> <td>≤ 10%</td> <td>10-20%</td> <td>20-50%</td> <td>50-80%</td> <td>> 80%</td> </tr> </table>	≤ 10%	10-20%	20-50%	50-80%	> 80%

	Low Risk		High Risk																							
Sector concentration risk	≤ 20%	20-50%	50-80%																							
	> 80%																									
	Low Risk		High Risk																							
Country concentration risk	≤ 20%	20-50%	50-80%																							
	> 80%																									
4	Maximum Drawdown	<p>Maximum drawdown means an accumulated loss as a result of the investment in the past five years from the reporting date (or since inception if the fund has been established for less than five years). It is calculated as follows:</p> $\text{Drawdown}_{(t)} = \frac{\text{Unit value}_{(t)} - \text{Highest unit value}^*}{\text{Highest unit value}^*}$ $\text{Maximum Drawdown} = \min (\text{Drawdown}(t))$ <p>Remark: * Highest unit value means the highest value of unit in the preceding period up to the calculation date (t).</p>																								
5	Standard Deviation	<p>Standard Deviation (SD) of Fund measures the volatility the fund's returns, using the calculation as prescribed by Association of Investment Management Companies re: Standard for Measurement and Presentation of Performance of the Mutual Funds. SD expresses the historical performance in annual percentage for the five years preceding the reporting date.</p>																								
6	Tracking Error	<p>Tracking Error (TE) is the difference between a mutual fund portfolio's returns and the benchmark index it was designed to copy. This indicates how well the mutual fund is performing against the benchmark index and shows how much the mutual fund deviates from the benchmark index. For example, if the mutual has a low TE, this means the fund has slightly deviated from the benchmark index and therefore the fund is efficient in copying the benchmark index. On the other hand, if the mutual has a low TE, this means the fund has substantially deviated from the benchmark index and therefore it is unlikely that the fund will achieve return at similar rate to the benchmark index.</p> <p>TE is used for tracking error of passive funds/ index tracking such as index fund or ETF.</p>																								
7	Portfolio Turnover Ratio	<p>Portfolio Turnover Ratio (PTR) is the percentage of a mutual fund or other investment's holdings that have been replaced in a given year which can better reflect the investment strategies employed by the fund manager. It is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over the past 12-month period, divided by the total net asset value (NAV) of the fund of the same period.</p> $\text{PTR} = \frac{\text{Min (Subscription, Redemption)}}{\text{Average NAV}}$
