Duration of security (approximately)					6 months

Remark:

- (1) The Management Company shall exercise discretion in changing assets for investment or investment proportion when the action is taken as necessary and appropriate in the best interest of the investors, provided that the total risk profile of the assets for investment shall not materially change. Furthermore, instruments in which the fund will invest may change to other types/issuers or new types of instruments may be added to the above. The Management Company may, at its discretion, readjust its selection of target instruments that are not disclosed above. The example includes, but not limited Industrial and Commercial Bank of China (ICBC), Industrial and Commercial Bank of China Asia (ICBC Asia), Bank of East Asia (BEA), China Construction Bank (CCB), Standard Chartered Bank (Singapore), Standard Chartered Bank (Hong Kong), United Overseas Bank LTD (UOB), Abu Dhabi Commercial Bank (ADCB), Mashreqbank PSC (MASQ), Qatar National Bank (QNB), CIMB, Bank of Communications (BOCOM), Al Khalij Commercial Bank (KCBK), First Abu Dhabi Bank (FAB), Emirates NBD PJSC (ENBD), Bank Negara Indonesia Persero Tbk PT (BNI), Bank Rakyat Indonesia (BRI), Malayan Banking BHD, Thai Government Debt Securities, Bank of Thailand (BOT), Supalai PCL., Land and House PCL., Ayudhya Capital Auto lease PLC., Bank of Ayudhya PLC., CIMBT Bank PCL., TISCO Bank PCL., Government Housing Bank(Thailand), Government Saving Bank(Thailand), Kiatnakin Bank PCL., Thanachart Bank PCL., Saudi National Bank (SNB), and/or other debt securities under KSAM investment universe.
- (2) Rate of return proposed by the issuers or the sellers is as of 23 June 2022.
- (3) Fees charged to the fund are subject to change, however, shall not exceed the amount specified in the project information.
- (4) In case that the Management Company could not invest in the target portfolio due to changing in market conditions, or related tax rate/scheme of the underlying securities has been changed significantly, the unitholders thus may not receive the return at the proposed yield and/or the company may consider not to provide auto-redemption at the proposed rate.
- (5) In the case where the rate of return of the Fund after deduction of expenses is higher than the average annual rate of return for auto-redemption that is notified during the IPO period, the Management Company reserves the right to collect higher management fee and/or registrar fee than the initially estimated rates but not exceeding the maximum rates as specified in the Fund's Prospectus.
- (6) Credit rating from other credit rating agencies may be different from the above referred credit rating.

Definitions

Maximum Drawdown: The maximum percentage of loss of a fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is measured from the highest value of the fund's NAV per unit to the lowest value during the period that the NAV per unit is depreciating. The Maximum drawdown is used to assess the risk of possible loss that could occur from investing in a fund.

Recovering Period: A duration of time that let the investors know how long it will take for a fund to recover from a peak of loss to the original level of investment.

FX Hedging: Percentage of foreign currency denominated assets in the investment portfolio that are hedged against foreign exchange risk.

Portfolio Turnover Ratio: The trading frequency of assets in the investment portfolio during a certain period of time. It is calculated by taking either the total amount of new securities purchased or the number of securities sold (whichever is less) over a period of one year, divided by the average net asset value (NAV) of the fund over the corresponding period. A fund with high portfolio turnover indicates that the securities in the portfolio are frequently traded by the fund manager and hence high securities dealing cost. Therefore, investors must take into consideration the performance of the fund in order to determine the cost worthiness of such securities trading transactions.

Yield to Maturity (YTM): The rate of return earned from a debt instrument that is held by the investor until its maturity date. It is calculated from the total coupon payments to be received throughout the maturity of the instrument plus the principal repayments, converted into present discounted value. The YTM is used to measure the rate of return of a fixed income fund by weighting the average yield of each debt instrument in the portfolio. Since YTM is expressed as an annual percentage, it can be used for performance comparison between different fixed income funds with a held-to-maturity investment policy which have similar investment characteristics.
