Benefits

An investment strategy that aims to produce returns driven by stock selection while achieving some downside protection in declining equity markets.

The fund is managed in accordance with UCITS rules & guidelines.

The fund offers daily liquidity.

You put your trust in the skills of a portfolio management team with an extensive experience in fundamental research and quantitative as well as qualitative analysis.

Additional information

- The portfolio manager seeks to generate positive returns with long or short equity exposure on stocks he is either positive or negative on. In addition he aims to generate returns from incorporating his view on market movements and varying net equity market exposure.
- The fund seeks to generate an annualized ex-ante volatility below global equity markets.
- The fund suits experienced investors who want to diversify their portfolio and understand the risks.

Risks

UBS Equity Long-Short Funds deliver a long and short exposure to equities in order to reduce the volatility of the portfolio compared to a common long only equity fund. Despite the expected reduction in volatility, the funds can still be subject to high fluctuations in value. The fund may enter into OTC derivative contracts to generate the equity exposure. These contracts are collateralised, however the risk of a counterparty default remains. UBS Equity Long-Short Funds pursue an active management style and may deliver significant negative performance over certain periods. The fund can perform negatively while underlying equity markets perform positively and vice versa. Each fund has specific risks, which can significantly increase under unusual market conditions. As the fund uses derivatives & sophisticated leverage techniques, investors must be willing to bear the additional risk involved.
